

Vanessa Bell

Senior Product Designer · UX Research + Engineering

vanessa.bell14@gmail.com · 805.245.8505 · vanessabell.design · in/vanessajobanbell

Product designer and researcher who turns complex, workflow-heavy clinical tools into intuitive, polished interfaces. I own design end to end, from research and IA through high-fidelity UI, and ship it in production code (React, TypeScript) alongside engineering rather than handing off a mock. Software engineering background, experienced across health tech and clinical workflows, at home with ambiguity and high ownership on early-stage teams.

Skills

DESIGN Product & Visual Design · Interaction Design · Information Architecture · Design Systems · User Research · Usability Testing · Heuristic Evaluation · Figma

ENGINEERING React · TypeScript · React Native · WordPress

AI AI-augmented design workflows · Claude Code

Experience

Vanessa Bell Design

Fractional UX / Product Designer & Design Engineer · Mar 2025 – Present · Remote

Product Designer & Frontend Engineer, Forma Health

Mar 2025 – May 2026

- Sole designer for research, design, and frontend implementation of a rare-disease study configuration portal built in Angular/TypeScript.
- Redesigned the review experience around an AI-first model (LLM auto-runs on utterance creation, read-only by default, contextual CTAs) and shipped the production UI; the underlying pattern was adopted by engineering for the patient-facing mobile app.
- Delivered a **9x reduction** in time and steps for a workflow researchers repeat dozens of times. A physician-researcher who had called the tool "*kind of a burden*" called it "*fun*" after launch.

UX Lead, Research & Concept Validation, SpendLight

Sep 2025 – Oct 2025

- Led generative research on why users abandon budgeting tools; designed and tested Figma prototypes; validated a journaling-based MVP.

UX Designer & Researcher, Talofa Games (CoCreate Cohort)

Jun 2025 – Aug 2025

- Ran moderated and unmoderated usability studies for a mobile fitness game; turned findings into design changes within existing technical constraints.

AllStripes

Health tech (rare disease) · Oct 2020 – Oct 2023 · Remote

Senior Software Engineer (Focus on Internal UX & Tooling)

Jan 2022 – Oct 2023

Operated at the intersection of software engineering and user experience, building internal tools and patient-facing applications for a health tech platform.

- Led the UX and technical implementation of a PDF file chunking process, a **95% reduction** in time to process 100-page medical records, directly enabling patients to access their records faster.
- Designed the data model and built the React frontend for a new patient onboarding survey flow.
- Designed and developed a self-serve UI that let the internal research team create target audiences for embedded surveys without ongoing engineering or design support.

Software Engineer

Oct 2020 – Dec 2021

- Built internal tools (React, TypeScript, Postgres) for medical-record operations; led AT/QA improvements that raised product quality.

Earlier: Software Engineer, multiple SF companies

2017 – 2020

- Shipped user-facing web and mobile products (React, React Native, TypeScript) in close partnership with product and design.

Education & Certifications

CoCreate, UX Design Externship · 2025

Designlab, Web & UI Design Certificate · 2024

Santa Clara University, B.A. Sociology, minors in International Business & Spanish · 2014

Coursera, Google UX Design Certificate · 2025

Coding Dojo, Full Stack Web Development · 2016
